

Sports Turf & Recreation Applications: Top Dressing and Existing Turf

Topdressing with HydRocks® on existing turf creates a permanent addition to the soil, improves drainage, fills low spots, and helps provide a more level surface.

Additionally, it helps promote the microbial action, which breaks down thatch and organic matter to improve nutrient availability to the grass and plants.

First, and best, is following mechanical aeration.

- Apply HydRocks® to closely cropped and aerated turf surface to form a 3/8" to 1/2" uniform layer.
- Rake HydRocks® into the 2" to 4" deep core holes, or simply allow it to drop into the holes without raking.
